

ENGINEERING APTITUDE

(QUANTITATIVE APTITUDE AND ANALYTICAL ABILITY)

(For ESE GATE & PSUs Exam)

(CE, ME, PI, CH, EC, EE, IN, CS, IT)

Salient Features :

- More than 170 topics covered
- 530+ theoretical examples for in-depth understanding
- 390+ chapterwise practice questions with detailed solutions
- 930+ previous years questions with detailed solutions
UPSC (37 yrs), GATE (16 yrs) & ESE (8 yrs)

PREFACE

Union Public Services Commission (UPSC) in its quest for best engineering minds looks for the very basic pride of an engineer, which it tests through quantitative and analytical abilities of candidates. The profession itself calls for putting candidates in situations, both human and technical, where things are tied into hundred knots. As an engineer one is expected to think critically, detect systematic themes while analysing data, and achieve thoroughness with accuracy in deriving solutions under challenging circumstances.

To test these qualities in an ESE, GATE & other Engineering Exam aspirant, in the year 2017, UPSC introduced Engineering Aptitude as a part of the syllabus for the common paper of ESE in 2017. Also, Engineering Aptitude is having good weightage in GATE & other engineering exams, and thus, it is important for GATE & others exams too. With an objective to develop these abilities, IES Master has come up with the revised and updated **Eighth edition** of the book Engineering Aptitude that acquaints an ESE aspirant to thousands of problems under various sub-heads such as probability, polynomials, speed-time, work-time, clock and calendar, as well as geometry and measurements that they might come across during their professional career. Covering more than **170 topics under 25 chapters in 5 units**, this book is an effort by IES Master to offer the complete theory of ESE syllabus along with previous years questions from **UPSC (last 37 years), GATE (last 16 years), and ESE (last 8 years) to the ESE aspirants.**

As you flip through the pages of this book, it captures your imagination with subtleness, and exposes you to more than **1,860+ problems**, enough to give your pen the required strength to take on any competitive exams including ESE, GATE and PSUs.

Having gone through the clarity and conciseness offered in this revised edition, we hope that as your fingers follow your command, the brain will engineer solutions no matter how difficult the challenge is.

CONTENTS

UNIT 1 : QUANTITATIVE APTITUDE

1.1	Number System	01–44
	(i) Number Line	01
	(ii) Definition of Various Types of Numbers	01
	(iii) Various forms of Number	02
	(iv) Concept of Prime and Composite Numbers	04
	(v) Factorization	06
	(vi) Factorial	06
	(vii) Factorization of Factorial	07
	(viii) Last Digit Problems	09
	(ix) Number of Zeros at the End of any Product	10
	(x) Divisibility Rules	11
	(xi) Relations between Dividend, Divisor and Quotient.....	14
	(xii) Successive Division	14
	(xiii) Remainder Theorem	15
	(xiv) LCM and HCF	18
	(xv) Indices or Powers	25
	(xvi) Surds	26
	(xvii) Simplification	28
	<i>Solved Examples</i>	31
	<i>Previous Years Questions UPSC/GATE/ESE</i>	34
1.2	Ratio and Proportion	45–60
	(i) Ratio	45
	(ii) Proportion	47
	(iii) Partnership.....	50
	<i>Solved Examples</i>	51
	<i>Previous Years Questions UPSC/GATE/ESE</i>	52

1.3	Percentage	61–76
	(i) Percentage	61
	(ii) Concept of Multiplying Factors	62
	(iii) Successive Percentage Change	63
	<i>Solved Examples</i>	66
	<i>Previous Years Questions UPSC/GATE/ESE</i>	67
1.4	Profit and Loss	77–91
	(i) Gain	77
	(ii) Loss	77
	(iii) Concept of Multiplying Factor Related to Profit and Loss	77
	(iv) Discount	81
	(v) Three Special Cases of Gain and Loss	82
	<i>Solved Examples</i>	84
	<i>Previous Years Questions UPSC/GATE/ESE</i>	87
1.5	Simple Interest and Compound Interest	92–100
	(i) Simple Interest	92
	(ii) Compound Interest	92
	(iii) Difference between CI and SI for First Two Years	94
	<i>Solved Examples</i>	96
	<i>Previous Years Questions UPSC/GATE/ESE</i>	98
1.6	Average and Alligation	101–128
	(i) Average	101
	(ii) Problems based on Ages	103
	(iii) Weighted Average	105
	(iv) Alligation	106
	(v) Problems based on Mixture of Two Liquids	111
	(vi) Addition of Pure Solution in a Mixture	112
	(vii) Removal and Replacement	113
	<i>Solved Examples</i>	117
	<i>Previous Years Questions UPSC/GATE/ESE</i>	121

1.7	Time and Work	129–148
(i)	Concept of Variation	129
(ii)	Work-Time	130
(iii)	Men Days	131
(iv)	Types of Questions	132
	<i>Solved Examples</i>	137
	<i>Previous Years Questions UPSC/GATE/ESE</i>	141
1.8	Speed, Distance and Time	149–179
(i)	Speed	149
(ii)	Analysis of Speed, Distance and Time Relationship	150
(iii)	Average Speed	152
(iv)	Relative Speed	154
(v)	Boats and Streams	155
(vi)	Linear and Circular Races	156
	<i>Solved Examples</i>	161
	<i>Previous Years Questions UPSC/GATE/ESE</i>	166
1.9	Geometry and Mensuration	180–245
(i)	Basic Concepts	180
(ii)	Polygon	184
(iii)	Triangle	187
(iv)	Triangle Classification	188
(v)	Similar Triangles	194
(vi)	Quadrilaterals	199
(vii)	Perimeter and Areas of Quadrilaterals	201
(viii)	Hexagon	203
(ix)	Circle	203
(x)	Properties of Circle	204
(xi)	Mensuration	210
	<i>Solved Examples</i>	215
	<i>Previous Years Questions UPSC/GATE/ESE</i>	223

UNIT 2 : ANALYTICAL REASONING

2.1	Ranking Test	246–251
	(i) Introduction	246
	<i>Solved Examples</i>	248
	<i>Previous Years Questions UPSC/GATE/ESE</i>	250
2.2	Dices and Cubes	252–269
	(i) Cubes	252
	(ii) Types of Problems	252
	(iii) Type 1 : Counting of Cubes	252
	(iv) Type 2 : Concept of Dice/Cube with Numbers	253
	(v) Type 3 : (Unfolded Cube/Dice)	255
	(vi) Type 4 : (Maximum Number of Pieces with 'x' Cuts)	256
	(vii) Type 5 : (Minimum Number of Cuts with 'n' Pieces)	257
	(viii) Type 6 : (Colouring of Cubes)	258
	<i>Solved Examples</i>	262
	<i>Previous Years Questions UPSC/GATE/ESE</i>	266
2.3	Direction Sense	270–292
	(i) Introduction	270
	(ii) Reference Compass	270
	(iii) Problem Solving Technique	270
	(iv) Types of Problems	271
	(v) Type I : Shortest Distance Based Questions	271
	(vi) Type II : Direction Based Questions	273
	(vii) Type III : Shadow Based Questions	275
	(viii) Type IV : Clocks Based Questions	276
	(ix) Type V : Faulty Compass Based Questions	277
	(x) Type VI : Rotation Based Questions	277
	<i>Solved Examples</i>	281
	<i>Previous Years Questions UPSC/GATE/ESE</i>	285

2.4	Blood Relationship	293–307
(i)	Introduction	293
(ii)	List of Relations	293
(iii)	Symbols Used in Family Diagram	293
(iv)	Types of Questions	294
(v)	Blood Relation Based on Conversation	294
(vi)	Blood Relation Based on Puzzle	297
(vii)	Coded Blood Relationship	298
	<i>Solved Examples</i>	301
	<i>Previous Years Questions UPSC/GATE/ESE</i>	304
2.5	Seating Arrangement	308–328
(i)	Introduction	308
(ii)	Linear Seating Arrangements	308
(iii)	Circular Arrangement	312
(iv)	Two Row Sitting Arrangements	314
(v)	Complex Arrangements	316
	<i>Solved Examples</i>	317
	<i>Previous Years Questions UPSC/GATE/ESE</i>	322
2.6	Coding Decoding	329–339
(i)	Introduction	329
(ii)	Type I : Change in Relative Position of Letters	329
(iii)	Type II : Shifting of Letters to Form New Word	329
(iv)	Type III : Coding Letter to Numbers	331
(v)	Type IV : Substitution Based Coding	332
(vi)	Type V : Mixed Number Coding	332
(vii)	Type VI : Mixed Letter Coding	333
(viii)	Type VII : Direct Letter Coding	334
(ix)	Type VIII : Mixed Type Coding	334
	<i>Solved Examples</i>	336
	<i>Previous Years Questions UPSC/GATE/ESE</i>	338

2.7	Puzzles	340–374
	(i) Introduction	340
	<i>Solved Examples</i>	346
	<i>Previous Years Questions UPSC/GATE/ESE</i>	349
2.8	Clocks	375–387
	(i) Clocks	375
	(ii) Types of Problems	376
	(iii) Type 1: Angle Between Two Hands (when time is given)	376
	(iv) Type 2 : Time (when angle between two hands is given)	376
	(v) Type 3 : Slow and Fast Clocks	378
	(vi) Type 4 : Overall Gain or Loss of Time	378
	(vii) Type 5 : Mirror Based Problems	379
	<i>Solved Examples</i>	380
	<i>Previous Years Questions UPSC/GATE/ESE</i>	382
2.9	Calendars	388–394
	(i) Concepts of Extra Days (or) Odd Days	388
	(ii) Important Points	388
	(iii) Types of Problems	389
	<i>Solved Examples</i>	392
	<i>Previous Years Questions UPSC/GATE/ESE</i>	394

UNIT 3 : CRITICAL REASONING

3.1	Basic Concepts of Syllogism	395–426
	(i) Introduction	395
	(ii) Basic Terminology	395
	(iii) Classification of Propositions	397
	(iv) Elimination Techniques of Venn Diagrams	400
	(v) Adjectives in Syllogism	401
	(vi) Conclusions from Multiple Statements	401
	(vii) Types of Conclusions	402

	(viii) Special Case (The Case of “EITHER ... OR ...”)	403
	<i>Solved Examples</i>	405
	<i>Previous Years Questions UPSC/GATE/ESE</i>	418
3.2	Critical Reasoning	427–451
	(i) Introduction	427
	(ii) Basic Terminology	427
	(iii) Steps Followed in Critical Reasoning	427
	(iv) Types of Questions	428
	<i>Solved Examples</i>	434
	<i>Previous Years Questions UPSC/GATE/ESE</i>	443
UNIT 4 : MODERN MATHS		
4.1	Sequences and Series	452–484
	(i) Sequence	452
	(ii) Series	452
	(iii) Arithmetic Progression (AP)	452
	(iv) Geometric Progression (GP)	455
	(v) Arithmetico–Geometric Progression (AGP)	459
	(vi) Harmonic Progression (HP)	460
	(vii) Sum of General Series	461
	(viii) Hidden Sequences	464
	<i>Solved Examples</i>	465
	<i>Previous Years Questions UPSC/GATE/ESE</i>	472
4.2	Polynomials	485–525
	(i) Introduction	485
	(ii) Algebraic Expression and Various Terms	485
	(iii) Graph of Elementary Functions	487
	(iv) Linear Equation	488
	(v) Quadratic Equations	490
	(vi) Roots of a Polynomial of Higher Degree	494

(vii)	Maximum and Minimum Values of a Polynomial	496
(viii)	Inequalities	497
(ix)	Quadratic Inequalities	499
(x)	Modulus	501
(xi)	Logarithms	502
(xii)	Logarithmic Inequalities	505
	<i>Solved Examples</i>	507
	<i>Previous Years Questions UPSC/GATE/ESE</i>	512
4.3	Set Theory	526–547
(i)	Set	526
(ii)	Types of Set	526
(iii)	Venn Diagrams of Different Sets	528
(iv)	Standard Results Based on Venn Diagrams	529
(v)	Algebraic Laws of Sets	530
(vi)	Concept of maximizing or Minimizing the Intersection and Union	532
	<i>Solved Examples</i>	534
	<i>Previous Years Questions UPSC/GATE/ESE</i>	537
4.4	Permutation and Combination	548–591
(i)	Fundamental Principle of Counting	548
(ii)	Permutation	549
(iii)	Combination	551
(iv)	Total Number of Combinations	553
(v)	Difference between Permutation and Combination	554
(vi)	Permutation of Alike Items	556
(vii)	Division of Items into Groups of Different Sizes	558
(viii)	Division of Different Items into Groups of Equal Size	558
(ix)	Distribution of Different Items	560
(x)	Distribution of Identical Items into Groups	561
(xi)	Circular Permutation	563

(xii) Sum of all Numbers formed from given Digits	564
(xiii) Rank of a Word	565
(xiv) Number of Dearrangements	567
(xv) If Only Selections or Rejections is to be Considered	568
(xvi) Formation of Words / Formation of Numbers	569
<i>Solved Examples</i>	571
<i>Previous Years Questions UPSC/GATE/ESE</i>	577

UNIT 5 : DATA INTERPRETATION

5.1 Data Interpretation	592–644
(i) Introduction	592
(ii) Some Theoretical Concepts	592
(iii) Tables	593
(iv) Line Graph	597
(v) Bar Graph	600
(vi) Pie Charts	609
(vii) Double pie charts	616
(viii) Combination of Graphs	619
<i>Solved Examples</i>	624
<i>Previous Years Questions UPSC/GATE/ESE</i>	628

1.1

NUMBER SYSTEM

NUMBER LINE

Number line is a line on which all the positive and negative numbers can be represent in a sequence. It stretches from negative infinity to positive infinity.

DEFINITION OF VARIOUS TYPES OF NUMBERS

Natural Numbers

Counting Numbers 1, 2, 3, 4, are called Natural Numbers. The symbolic representation is N, i.e.,
 $N = \{1, 2, 3, 4, 5, \dots\}$.

Whole Numbers

All the natural numbers together with '0' are called Whole Numbers and the symbolic representation is W, i.e.,
 $W = \{0, 1, 2, 3, 4, \dots\}$

Integers

An integer is a number that can be written without a fractional component, it is represented by 'Z'.
Integers are further classified into positive integers (2, 4, 5 etc.), zero (0) and negative integers (-2, -5 etc.).

Rational Numbers

A number which can be expressed in the form of $\frac{p}{q}$ where, p and q are integers and $q \neq 0$, is called a rational number.

For example : Any integer number is a rational number since, it can be written as the ratio of two integer numbers, one the integer number itself and another number is 1.

Other examples of rational number are $\frac{2}{3}, -\frac{3}{7}, \dots$ etc.

Note : A decimal represents a rational number if and only if it has a finite number of digits. But recurring decimals are exceptions as they are also assumed as Rational Numbers, i.e., all recurring decimals are rational numbers.

Irrational Numbers

A real number, which is not rational, is called **irrational number**. An irrational number has non-terminating and non-recurring decimal part.

Between any two numbers, there are infinite numbers of irrational numbers.

Examples of irrational numbers are : $\sqrt{3}, \sqrt{5}, \sqrt[3]{7}, \sqrt[4]{11}$

Numbers π and e are also irrational number because both have non-terminating and non-recurring decimal part.

$\pi = 3.14159265358979\dots$ and $e = 2.71828182859045\dots$ where, e is called Euler's number.

Note : Any terminating **or** recurring decimal is a rational number. Any non-terminating **and** non-recurring decimal is an irrational number.

Example 1

Which one of the following is not a rational number?

- (a) $\frac{3}{8}$ (b) $-\frac{111}{23}$ (c) $\sqrt{2}$ (d) None of these

Sol. (c)

The number is option (a) and (b) are rational numbers, as they are the ratio of two integers. The number $\sqrt{2}$ is non-recurring, so it is not a rational number.

Real Numbers

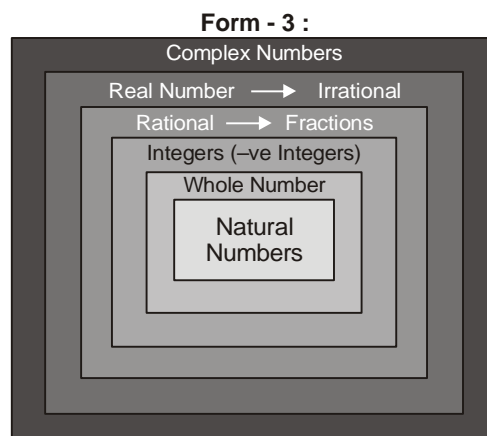

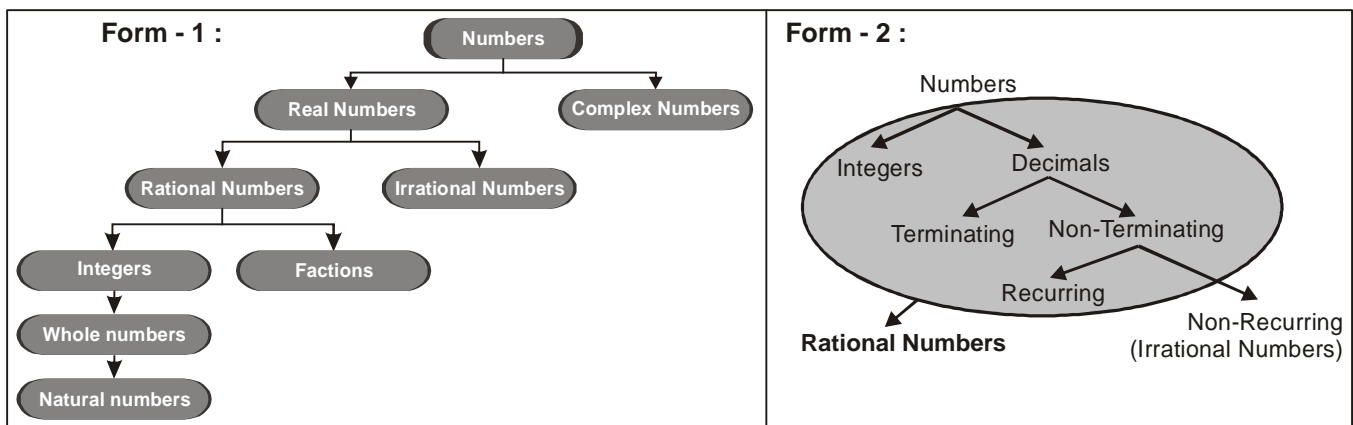

The real numbers include all the measuring numbers. The symbol for the real number is R. **All the numbers which can be represented on the number line are called real numbers.**

Complex Numbers

All the numbers that can be represented in $a + ib$ form where a & b are real numbers and $i = \sqrt{-1}$ are called Complex Numbers.

$$C = \{a + ib; a, b \in R \text{ \& } i^2 = -1\}$$

VARIOUS FORMS OF NUMBER TREE

1.4

PROFIT AND LOSS

Cost Price

The cost price of an article (or an item) is the price at which that article has been purchased, it is abbreviated as cost price (CP).

Selling Price

The selling price of an article is the price at which that article has been sold. It is abbreviated as selling price (SP).

Marked Price

The price that is indicated or marked on the product is called marked price. Marked price is also defined as the price which is given in the price list. So, marked price is also known as the **list price**.

GAIN

If the selling price (SP) of an article is more than the cost price (CP) then, the difference of these two is called as profit or gain.

$$\therefore \text{Profit or Gain} = \text{SP} - \text{CP} \text{ \& \; Percentage profit} = \frac{\text{SP} - \text{CP}}{\text{CP}} \times 100 = \frac{\text{Profit}}{\text{CP}} \times 100$$

LOSS

If the cost price of an article is greater than the selling price then the difference of these two is called as loss.

$$\text{Loss} = \text{CP} - \text{SP} \text{ \& \; Percentage loss} = \frac{\text{CP} - \text{SP}}{\text{CP}} \times 100 = \frac{\text{Loss}}{\text{CP}} \times 100$$

- Note :**
1. If the selling price (SP) and percentage gain is given then, Cost price, $CP = \left[\frac{100}{100 + \% \text{ Gain}} \right] \times SP$
 2. If the selling price and percentage loss is given then, Cost price, $CP = \left[\frac{100}{100 - \% \text{ Loss}} \right] \times SP$

CONCEPT OF MULTIPLYING FACTOR RELATED TO PROFIT AND LOSS

Sometimes this traditional formula of computing Profit & Loss percentage is not very easy to calculate. So rather than using that formula, we can use the concept of multiplying factor (f) related to profit percentage.

If f is the multiplying factor for profit & loss percentage, then

$$[\text{CP} \times f = \text{SP}]$$

For example, Amit sells his watch for Rs. 200 for a profit of 20%. At what price did Amit purchased it.

Sol. Approach 1 : Let x is the CP of the watch, then

$$x + \frac{20x}{100} = 200 \Rightarrow x = 166.66$$

Approach 2 : Since, $20\% = \frac{1}{5}$, so multiplying factor for profit $(f) = 1 + \frac{1}{5} = \frac{6}{5}$

$$\text{Hence, } CP \times f = SP \Rightarrow CP \times \frac{6}{5} = 200 \Rightarrow CP = 166.66$$

Example 1

Two lots of onions with equal quantity, one costing ₹ 10 per kg and the other costing ₹ 15 per kg, are mixed together and whole lot is sold at ₹ 15 per kg. What is the profit or loss?

- (a) 10% loss (b) 10% profit (c) 20% profit (d) 20% loss

Sol. (c)

Method-I: Let the weight of each onion lot is x kg.

Then, the total cost price of both the lots = $10 \times x + 15 \times x = 25x$

When both the lots are mixed then, selling price of both the lots = $15 \times 2x = 30x$

As selling price is more than the cost price so, there will a profit.

$$\therefore \% \text{ profit} = \frac{SP - CP}{CP} \times 100 = \frac{30x - 25x}{25x} \times 100 = 20\%$$

Method-II : As discussed in method I, total CP = $25x$ & total SP = $30x$

and we know that $CP \times f = SP$ where $f =$ multiplying factor for % increase or % decrease.

$$\text{so, } (25x) \times f = 30x \Rightarrow f = \frac{30}{25} = \frac{6}{5} = 1 + \frac{1}{5} \quad \therefore \frac{1}{5} \approx 20\% \text{ so profit \%} = 20\%$$

Example 2

A merchant earns a profit of 20% by selling a basket containing 80 apples which cost is ₹ 240 but he gives one-fourth of it to his friend at cost price and sells the remaining apples. In order to earn the same profit, at what price must he sell each apple?

- (a) ₹ 3.00 (b) ₹ 3.60 (c) ₹ 3.80 (d) ₹ 4.80

Sol. (c)

Method-I: The cost price of each apple = $\frac{240}{80} = ₹ 3$

As merchant gives 25% (i.e. one fourth) apples to his friend so, the selling price of these 25% apples

$$= 80 \times \frac{25}{100} \times 3 = ₹ 60$$

To get 20% profit, the selling price of all apples would be = 120% of 240 = ₹ 288

Hence, the selling price of remaining three-fourth (or 75%) apples must be = $288 - 60 = ₹ 228$

$$\therefore \text{Price of each apples} = \frac{228}{\frac{3}{4} \times 80} = ₹ 3.8$$

Method-II: Total apples = 80, Number of apples given by him to his friend = $\left(\frac{1}{4}\right)^{\text{th}}$ of total apples = $\frac{1}{4} \times 80 = 20$ Apples
