

ENGINEERING APTITUDE

(QUANTITATIVE APTITUDE AND ANALYTICAL ABILITY)

(For ESE GATE & PSUs Exam)

(CE, ME, PI, CH, EC, EE, IN, CS, IT)

Salient Features :

- More than 170 topics covered
- 530+ theoretical examples for in-depth understanding
- 390+ chapterwise practice questions with detailed solutions
- 725+ previous years questions with detailed solutions
UPSC (39 yrs), GATE (12 yrs) & ESE (4 yrs)

PREFACE

Union Public Services Commission (UPSC) in its quest for best engineering minds looks for the very basic pride of an engineer, which it tests through quantitative and analytical abilities of candidates. The profession itself calls for putting candidates in situations, both human and technical, where things are tied into hundred knots. As an engineer one is expected to think critically, detect systematic themes while analysing data, and achieve thoroughness with accuracy in deriving solutions under challenging circumstances.

To test these qualities in an ESE aspirant, in the year 2016, UPSC introduced Engineering Aptitude as a part of the syllabus for the common paper of ESE in 2016. With an objective to develop these abilities, IES Master has come up with the revised and updated **Fourth edition** of the book Engineering Aptitude that acquaints an ESE aspirant to thousands of problems under various sub-heads such as probability, polynomials, speed-time, work-time, clock and calendar, as well as geometry and measurements that they might come across during their professional career. Covering more than **170 topics under 25 chapters in 5 units**, this book is an effort by IES Master to offer the complete theory of ESE syllabus along with previous years questions from **UPSC (last 39 years), GATE (last 12 years), and ESE (last 4 years) to the ESE aspirants.**

As you flip through the pages of this book, it captures your imagination with subtleness, and exposes you to more than **1,650+ problems**, enough to give your pen the required strength to take on any competitive exams including ESE, GATE and PSUs.

Having gone through the clarity and conciseness offered in this revised edition, we hope that as your fingers follow your command, the brain will engineer solutions no matter how difficult the challenge is.

IES Master Publication

CONTENTS

UNIT 1 : QUANTITATIVE APTITUDE

1.1	Number System	01–41
(i)	Number Line	01
(ii)	Definition of Various Types of Numbers	01
(iii)	Various forms of Number	02
(iv)	Concept of Prime and Composite Numbers	04
(v)	Factorization	06
(vi)	Factorial	06
(vii)	Factorization of Factorial	07
(viii)	Last Digit Problems	09
(ix)	Number of Zeros at the End of any Product	10
(x)	Divisibility Rules	11
(xi)	Relations between Dividend, Divisor and Quotient.....	14
(xii)	Successive Division	14
(xiii)	Remainder Theorem	15
(xiv)	LCM and HCF	18
(xv)	Indices or Powers	25
(xvi)	Surds	26
(xvii)	Simplification	28
	<i>Solved Examples</i>	31
	<i>Previous Years Questions UPSC/GATE/ESE</i>	34
1.2	Ratio and Proportion	42–55
(i)	Ratio	42
(ii)	Proportion	44
(iii)	Partnership.....	47
	<i>Solved Examples</i>	48
	<i>Previous Years Questions UPSC/GATE/ESE</i>	49

1.3	Percentage	56–71
	(i) Percentage	56
	(ii) Concept of Multiplying Factors	57
	(iii) Successive Percentage Change	58
	<i>Solved Examples</i>	61
	<i>Previous Years Questions UPSC/GATE/ESE</i>	62
1.4	Profit and Loss	72–86
	(i) Gain	72
	(ii) Loss	72
	(iii) Concept of Multiplying Factor Related to Profit and Loss	72
	(iv) Discount	76
	(v) Three Special Cases of Gain and Loss	77
	<i>Solved Examples</i>	79
	<i>Previous Years Questions UPSC/GATE/ESE</i>	82
1.5	Simple Interest and Compound Interest	87–94
	(i) Simple Interest	87
	(ii) Compound Interest	87
	(iii) Difference between CI and SI for First Two Years	89
	<i>Solved Examples</i>	91
	<i>Previous Years Questions UPSC/GATE/ESE</i>	93
1.6	Average and Alligation	95–120
	(i) Average	95
	(ii) Problems based on Ages	97
	(iii) Weighted Average	99
	(iv) Alligation	100
	(v) Problems based on Mixture of Two Liquids	105
	(vi) Addition of Pure Solution in a Mixture	106
	(vii) Removal and Replacement	107
	<i>Solved Examples</i>	111
	<i>Previous Years Questions UPSC/GATE/ESE</i>	115

1.7	Time and Work	121–140
(i)	Concept of Variation	121
(ii)	Work-Time	122
(iii)	Men Days	123
(iv)	Types of Questions	124
	<i>Solved Examples</i>	129
	<i>Previous Years Questions UPSC/GATE/ESE</i>	133
1.8	Speed, Distance and Time	141–169
(i)	Speed	141
(ii)	Analysis of Speed, Distance and Time Relationship	142
(iii)	Average Speed	144
(iv)	Relative Speed	146
(v)	Boats and Streams	147
(vi)	Linear and Circular Races	148
	<i>Solved Examples</i>	153
	<i>Previous Years Questions UPSC/GATE/ESE</i>	158
1.9	Geometry and Mensuration	170–228
(i)	Basic Concepts	170
(ii)	Polygon	174
(iii)	Triangle	177
(iv)	Triangle Classification	178
(v)	Similar Triangles	184
(vi)	Quadrilaterals	189
(vii)	Perimeter and Areas of Quadrilaterals	191
(viii)	Hexagon	193
(ix)	Circle	193
(x)	Properties of Circle	194
(xi)	Mensuration	200
	<i>Solved Examples</i>	205
	<i>Previous Years Questions UPSC/GATE/ESE</i>	213

UNIT 2 : ANALYTICAL REASONING

2.1	Ranking Test	229–234
	(i) Introduction	229
	<i>Solved Examples</i>	231
	<i>Previous Years Questions UPSC/GATE/ESE</i>	233
2.2	Dices and Cubes	235–252
	(i) Cubes	235
	(ii) Types of Problems	235
	(iii) Type 1 : Counting of Cubes	235
	(iv) Type 2 : Concept of Dice/Cube with Numbers	236
	(v) Type 3 : (Unfolded Cube/Dice)	238
	(vi) Type 4 : (Maximum Number of Pieces with 'x' Cuts)	239
	(vii) Type 5 : (Minimum Number of Cuts with 'n' Pieces)	240
	(viii) Type 6 : (Colouring of Cubes)	241
	<i>Solved Examples</i>	245
	<i>Previous Years Questions UPSC/GATE/ESE</i>	249
2.3	Direction Sense	253–272
	(i) Introduction	253
	(ii) Reference Compass	253
	(iii) Problem Solving Technique	253
	(iv) Types of Problems	254
	(v) Type I : Shortest Distance Based Questions	254
	(vi) Type II : Direction Based Questions	256
	(vii) Type III : Shadow Based Questions	258
	(viii) Type IV : Clocks Based Questions	259
	(ix) Type V : Faulty Compass Based Questions	260
	(x) Type VI : Rotation Based Questions	260
	<i>Solved Examples</i>	264
	<i>Previous Years Questions UPSC/GATE/ESE</i>	268

2.4	Blood Relationship	273–286
	(i) Introduction	273
	(ii) Symbols Used in Family Diagram	273
	(iii) Types of Questions	274
	(iv) Blood Relation Based on Conversation	274
	(v) Blood Relation Based on Puzzle	277
	(vi) Coded Blood Relationship	278
	<i>Solved Examples</i>	281
	<i>Previous Years Questions UPSC/GATE/ESE</i>	284
2.5	Seating Arrangement	287–304
	(i) Introduction	287
	(ii) Linear Seating Arrangements	287
	(iii) Circular Arrangement	291
	(iv) Two Row Sitting Arrangements	293
	(v) Complex Arrangements	295
	<i>Solved Examples</i>	296
	<i>Previous Years Questions UPSC/GATE/ESE</i>	301
2.6	Coding Decoding	305–315
	(i) Introduction	305
	(ii) Type I : Change in Relative Position of Letters	305
	(iii) Type II : Shifting of Letters to Form New Word	305
	(iv) Type III : Coding Letter to Numbers	307
	(v) Type IV : Substitution Based Coding	308
	(vi) Type V : Mixed Number Coding	308
	(vii) Type VI : Mixed Letter Coding	309
	(viii) Type VII : Direct Letter Coding	310
	(ix) Type VIII : Mixed Type Coding	310
	<i>Solved Examples</i>	312
	<i>Previous Years Questions UPSC/GATE/ESE</i>	314
2.7	Puzzles	316–337
	(i) Introduction	316
	<i>Solved Examples</i>	322
	<i>Previous Years Questions UPSC/GATE/ESE</i>	325

2.8	Clocks	338–348
	(i) Clocks	338
	(ii) Types of Problems	339
	(iii) Type 1: Angle Between Two Hands (when time is given).....	339
	(iv) Type 2 : Time (when angle between two hands is given).....	339
	(v) Type 3 : Slow and Fast Clocks	341
	(vi) Type 4 : Overall Gain or Loss of Time	341
	(vii) Type 5 : Mirror Based Problems	342
	<i>Solved Examples</i>	343
	<i>Previous Years Questions UPSC/GATE/ESE</i>	345
2.9	Calendars	349–355
	(i) Concepts of Extra Days (or) Odd Days	349
	(ii) Important Points	349
	(iii) Types of Problems	350
	<i>Solved Examples</i>	353
	<i>Previous Years Questions UPSC/GATE/ESE</i>	355
UNIT 3 : CRITICAL REASONING		
3.1	Basic Concepts of Syllogism.....	356–382
	(i) Introduction	356
	(ii) Basic Terminology	356
	(iii) Classification of Propositions	358
	(iv) Elimination Techniques of Venn Diagrams	361
	(v) Adjectives in Syllogism	362
	(vi) Conclusions from Multiple Statements	362
	(vii) Types of Conclusions	363
	(viii) Special Case (The Case of “EITHER ... OR ...”)	364
	<i>Solved Examples</i>	366
	<i>Previous Years Questions UPSC/GATE/ESE</i>	379
3.2	Critical Reasoning	383–402
	(i) Introduction	383
	(ii) Basic Terminology	383
	(iii) Steps Followed in Critical Reasoning	383
	(iv) Types of Questions	384
	<i>Solved Examples</i>	390
	<i>Previous Years Questions UPSC/GATE/ESE</i>	399

UNIT 4 : MODERN MATHS

4.1	Sequences and Series	403–432
	(i) Sequence	403
	(ii) Series	403
	(iii) Arithmetic Progression (AP)	403
	(iv) Geometric Progression (GP)	406
	(v) Arithmetico–Geometric Progression (AGP)	410
	(vi) Harmonic Progression (HP)	411
	(vii) Sum of General Series	412
	(viii) Hidden Sequences	415
	<i>Solved Examples</i>	416
	<i>Previous Years Questions UPSC/GATE/ESE</i>	423
4.2	Polynomials	433–469
	(i) Introduction	433
	(ii) Algebraic Expression and Various Terms	433
	(iii) Graph of Elementary Functions	435
	(iv) Linear Equation	436
	(v) Quadratic Equations	438
	(vi) Roots of a Polynomial of Higher Degree	442
	(vii) Maximum and Minimum Values of a Polynomial	444
	(viii) Inequalities	445
	(ix) Quadratic Inequalities	447
	(x) Modulus	449
	(xi) Logarithms	450
	(xii) Logarithmic Inequalities	453
	<i>Solved Examples</i>	455
	<i>Previous Years Questions UPSC/GATE/ESE</i>	460
4.3	Set Theory	470–489
	(i) Set	470
	(ii) Types of Set	470
	(iii) Venn Diagrams of Different Sets	472
	(iv) Standard Results Based on Venn Diagrams	473
	(v) Algebraic Laws of Sets	474
	(vi) Concept of maximizing or Minimizing the Intersection and Union	476
	<i>Solved Examples</i>	478
	<i>Previous Years Questions UPSC/GATE/ESE</i>	481

4.4	Permutation and Combination	490–529
(i)	Fundamental Principle of Counting	490
(ii)	Permutation	491
(iii)	Combination	493
(iv)	Total Number of Combinations	495
(v)	Difference between Permutation and Combination	496
(vi)	Permutation of Alike Items	498
(vii)	Division of Items into Groups of Different Sizes	500
(viii)	Division of Different Items into Groups of Equal Size	500
(ix)	Distribution of Different Items	502
(x)	Distribution of Identical Items into Groups	503
(xi)	Circular Permutation	505
(xii)	Sum of all Numbers formed from given Digits	506
(xiii)	Rank of a Word	507
(xiv)	Number of Dearrangements	509
(xv)	If Only Selections or Rejections is to be Considered	510
(xvi)	Formation of Words / Formation of Numbers	511
	<i>Solved Examples</i>	513
	<i>Previous Years Questions UPSC/GATE/ESE</i>	519

UNIT 5 : DATA INTERPRETATION

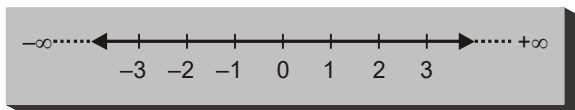

5.1	Data Interpretation	530–579
(i)	Introduction	530
(ii)	Some Theoretical Concepts	530
(iii)	Tables	531
(iv)	Line Graph	535
(v)	Bar Graph	538
(vi)	Pie Charts	547
(vii)	Double pie charts	554
(viii)	Combination of Graphs	557
	<i>Solved Examples</i>	562
	<i>Previous Years Questions UPSC/GATE/ESE</i>	566

1.1

NUMBER SYSTEM

NUMBER LINE

Number line is a line on which all the positive and negative numbers can be represent in a sequence. It stretches from negative infinity to positive infinity.

DEFINITION OF VARIOUS TYPES OF NUMBERS

Natural Numbers

Counting Numbers 1, 2, 3, 4, are called Natural Numbers. The symbolic representation is N, i.e.,
 $N = \{1, 2, 3, 4, 5, \dots\}$.

Whole Numbers

All the natural numbers together with '0' are called Whole Numbers and the symbolic representation is W, i.e.,
 $W = \{0, 1, 2, 3, 4, \dots\}$

Integers

An integer is a number that can be written without a fractional component, it is represented by 'Z'.
Integers are further classified into positive integers (2, 4, 5 etc.), zero (0) and negative integers (-2, -5 etc.).

Rational Numbers

A number which can be expressed in the form of $\frac{p}{q}$ where, p and q are integers and $q \neq 0$, is called a rational number.

For example : Any integer number is a rational number since, it can be written as the ratio of two integer numbers, one the integer number itself and another number is 1.

Other examples of rational number are $\frac{2}{3}, -\frac{3}{7}, \dots$ etc.

Note : A decimal represents a rational number if and only if it has a finite number of digits. But recurring decimals are exceptions as they are also assumed as Rational Numbers, i.e., all recurring decimals are rational numbers.

Irrational Numbers

A real number, which is not rational, is called **irrational number**. An irrational number has non-terminating and non-recurring decimal part.

Between any two numbers, there are infinite numbers of irrational numbers.

Examples of irrational numbers are : $\sqrt{3}, \sqrt{5}, \sqrt[3]{7}, \sqrt[4]{11}$

Numbers π and e are also irrational number because both have non-terminating and non-recurring decimal part.

$\pi = 3.14159265358979\dots$ and $e = 2.71828182859045\dots$ where, e is called Euler's number.

Note : Any terminating or recurring decimal is a rational number. Any non-terminating and non-recurring decimal is an irrational number.

Example 1

Which one of the following is not a rational number?

- (a) $\frac{3}{8}$ (b) $-\frac{111}{23}$ (c) $\sqrt{2}$ (d) None of these

Sol. (c)

The number is option (a) and (b) are rational numbers, as they are the ratio of two integers. The number $\sqrt{2}$ is non-recurring, so it is not a rational number.

Real Numbers

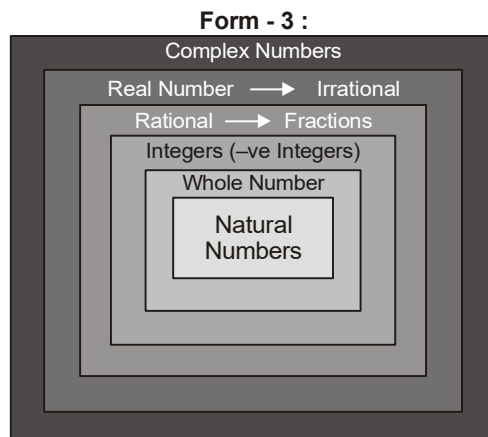

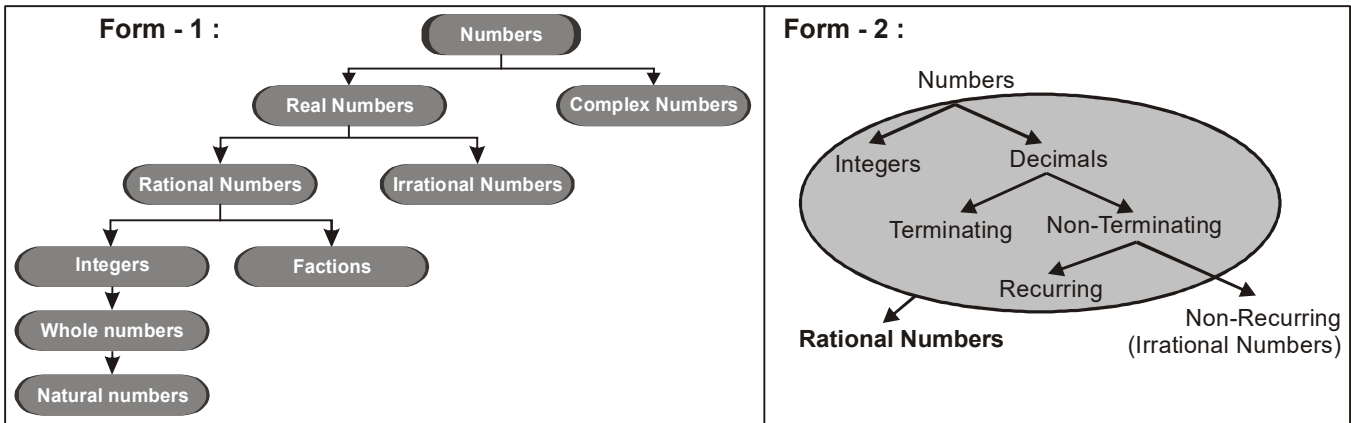

The real numbers include all the measuring numbers. The symbol for the real number is R. **All the numbers which can be represented on the number line are called real numbers.**

Complex Numbers

All the numbers that can be represented in $a + ib$ form where a & b are real numbers and $i = \sqrt{-1}$ are called Complex Numbers.

$$C = \{a + ib; a, b \in R \ \& \ i^2 = -1\}$$

VARIOUS FORMS OF NUMBER TREE

Example 2

Consider the following statements :

- I. Every natural number is a real number.
- II. Every real number is a rational number.
- III. Every integer is a real number.
- IV. Every rational number is a real number.

Which of the above statements are correct?

- (a) I, II and III
- (b) I, III and IV
- (c) II and III
- (d) III and IV

Sol. (b)

From the number tree, given above, all natural numbers are real numbers but its converse is not true. So, statement (I) is true.

Every real number is not a rational number, some may be irrational numbers. Hence, statement (II) is wrong.

Similarly, from number tree, we can say about statement (III) and (IV) that both the statements are true.

Recurring Decimals

A decimal in which a digit or a set of digits is repeated continuously is called a recurring decimal. For representing recurring decimal, we place bar on the repeated numbers.

For example : (i) The number $0.247632476324763\dots$ can be represented as $0.\overline{24763}$
 (ii) and similarly, the number $0.1555\dots$ can be represented as $0.1\overline{5}$

Example 3

Express the recurring decimal $0.\overline{230}$ in the form of a fraction.

Sol.

The given decimal can be written as $0.\overline{230} = 0.230230230\dots$... (i)

As the bar is placed on **three digits**, so, we will multiply the above equation by 10^3

$$0.\overline{230} \times 10^3 = 230.230230\dots \quad \dots (ii)$$

From equation (i) and (ii), we can write

$$(10^3 - 1) 0.\overline{230} = 230 \quad \text{or} \quad 0.\overline{230} = \frac{230}{10^3 - 1} = \frac{230}{999}$$

Example 4

The value of $1.\overline{34} + 4.1\overline{2}$ is

- (a) $\frac{133}{90}$
- (b) $\frac{371}{90}$
- (c) $5\frac{219}{990}$
- (d) $5\frac{461}{990}$

Sol. (d)

The decimal $1.\overline{34}$ can be written as $1.\overline{34} = 1.343434\dots$... (i)

As the bar is placed on two digits after decimal point, so, we will multiply the above equation by 10^2

$$1.\overline{34} \times 10^2 = 134.3434\dots \quad \dots (ii)$$

From equation (i) and (ii)

$$(10^2 - 1) 1.\overline{34} = 133 \quad \therefore 1.\overline{34} = \frac{133}{99}$$

In $4.1\overline{2}$, the bar is place on one digit so it can be written as $4.1\overline{2} = 4.1222\dots$... (i)

by multiplying 10^2 in above equation $4.1\overline{2} \times 10^2 = 412.222\dots$... (ii)
